

Tutorial for installing mysql on windows 10:

1. Click the url <https://dev.mysql.com/downloads/installer/> directly to see the latest version.

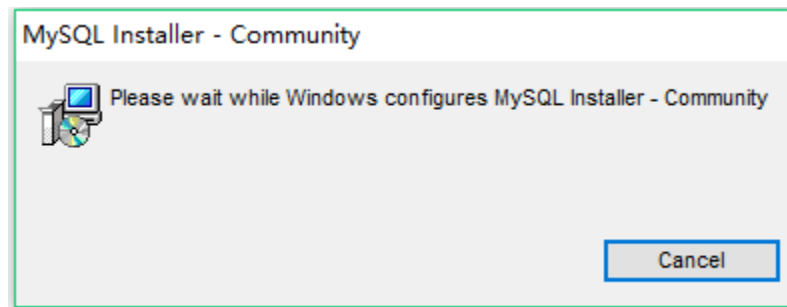

2. Click download.

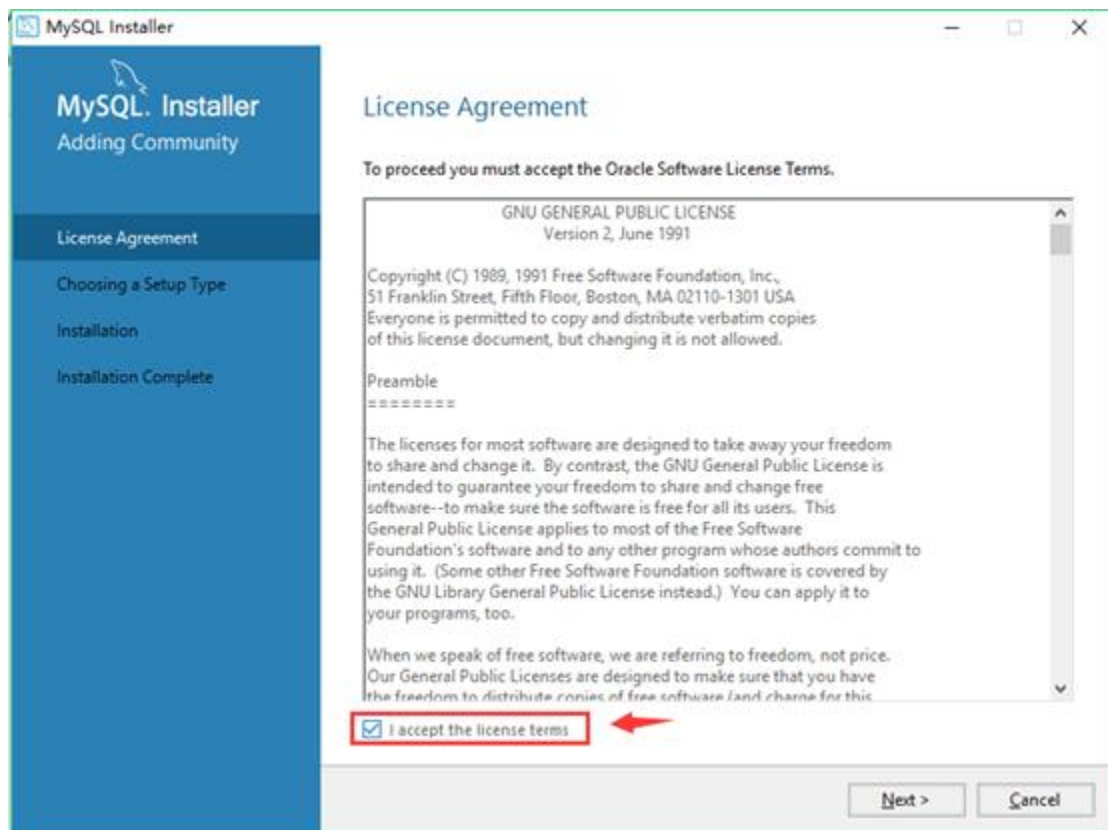

3. Choose " [No thanks, just start my download.](#) "

4. Double-click to run the downloaded mysql-installer-community-5.7.19.0.msi. The program will take some time to run, please wait.

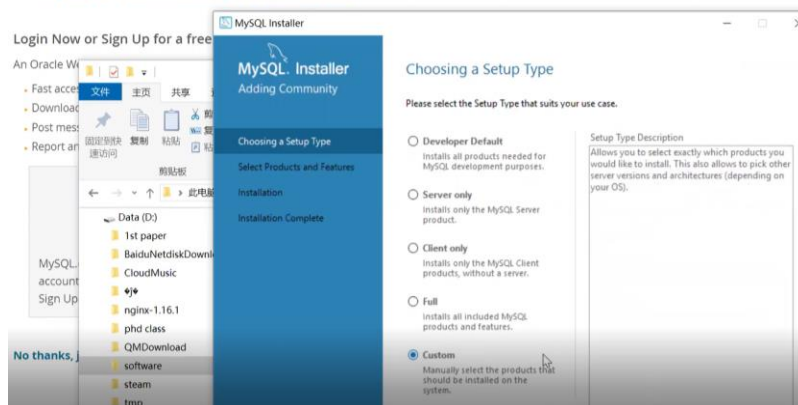

5. After running successfully, enter the welcome interface. Select I agree with the agreement, otherwise you cannot proceed to the next step.

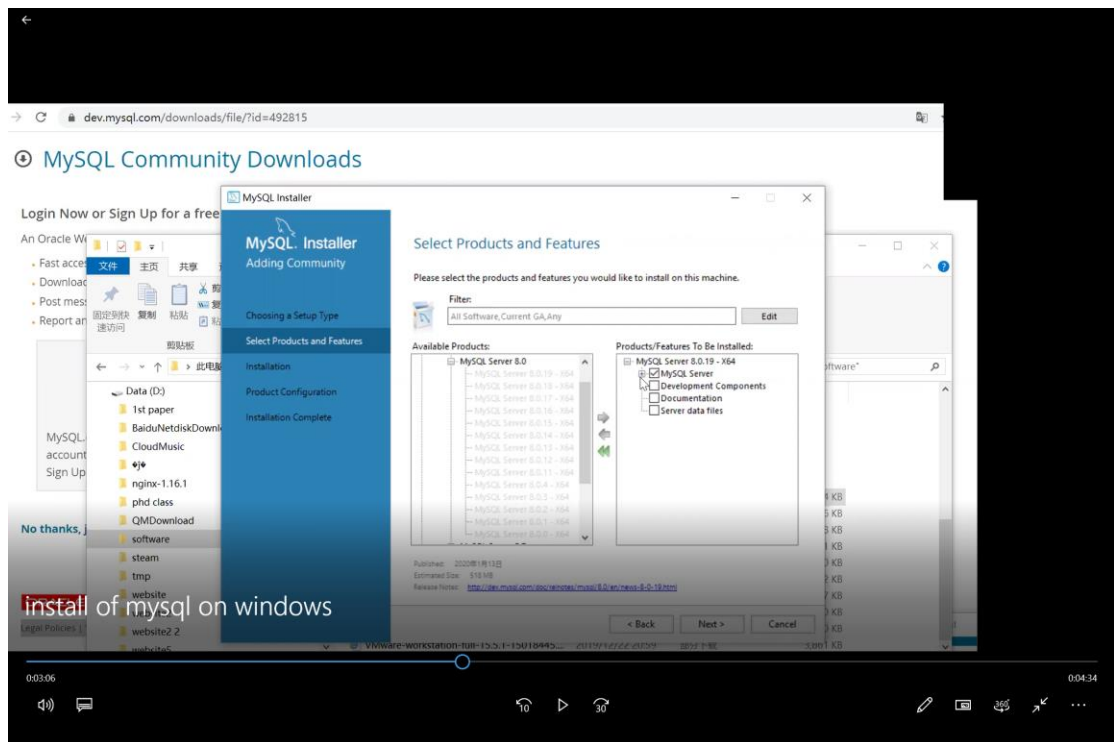

6. Enter the type selection page. Here I choose custom default.

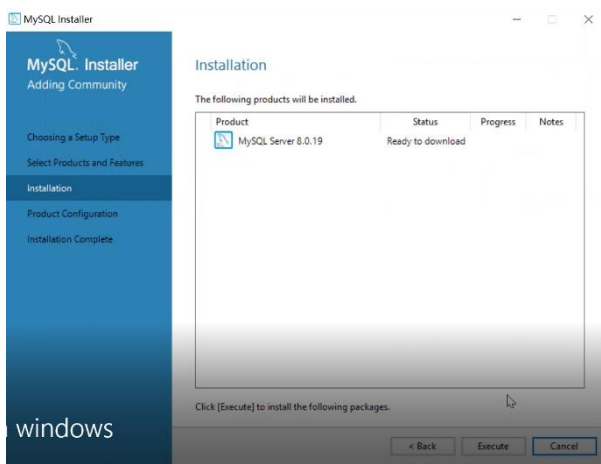

MySQL Community Downloads

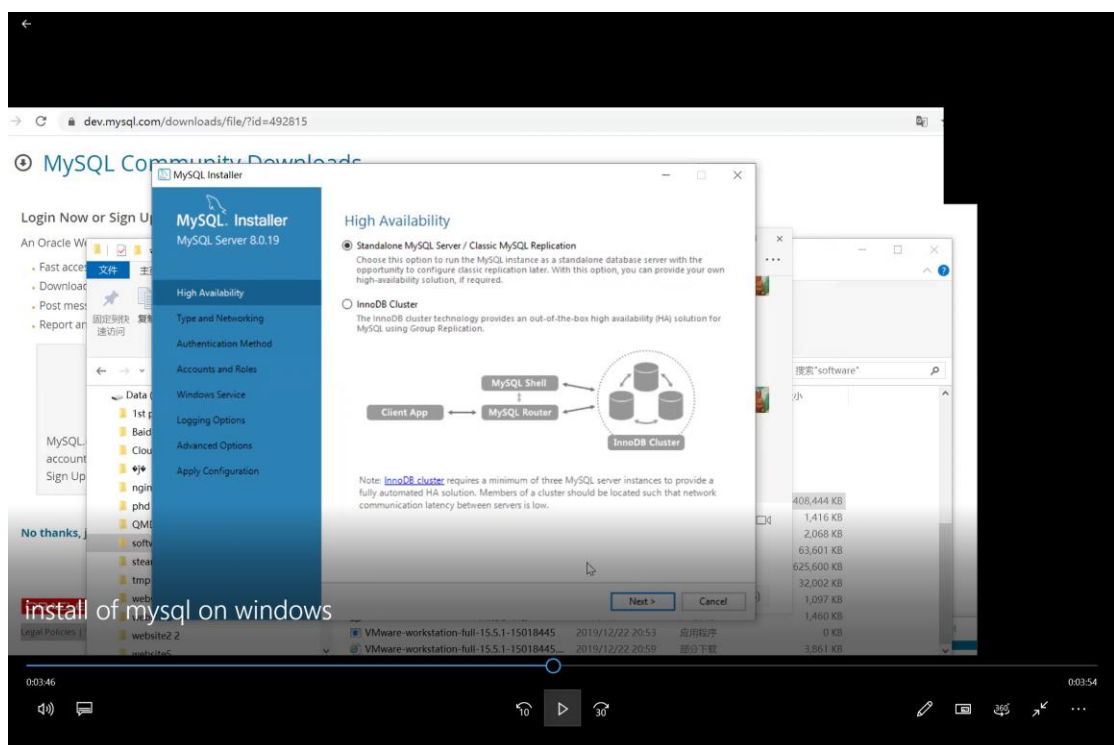

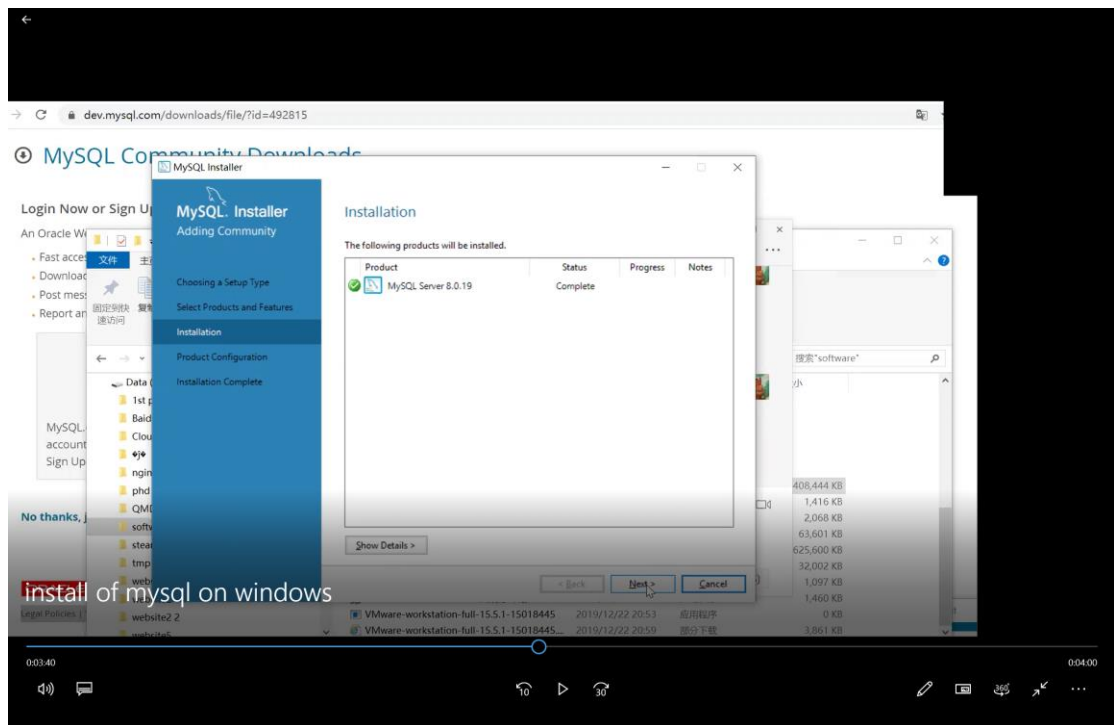

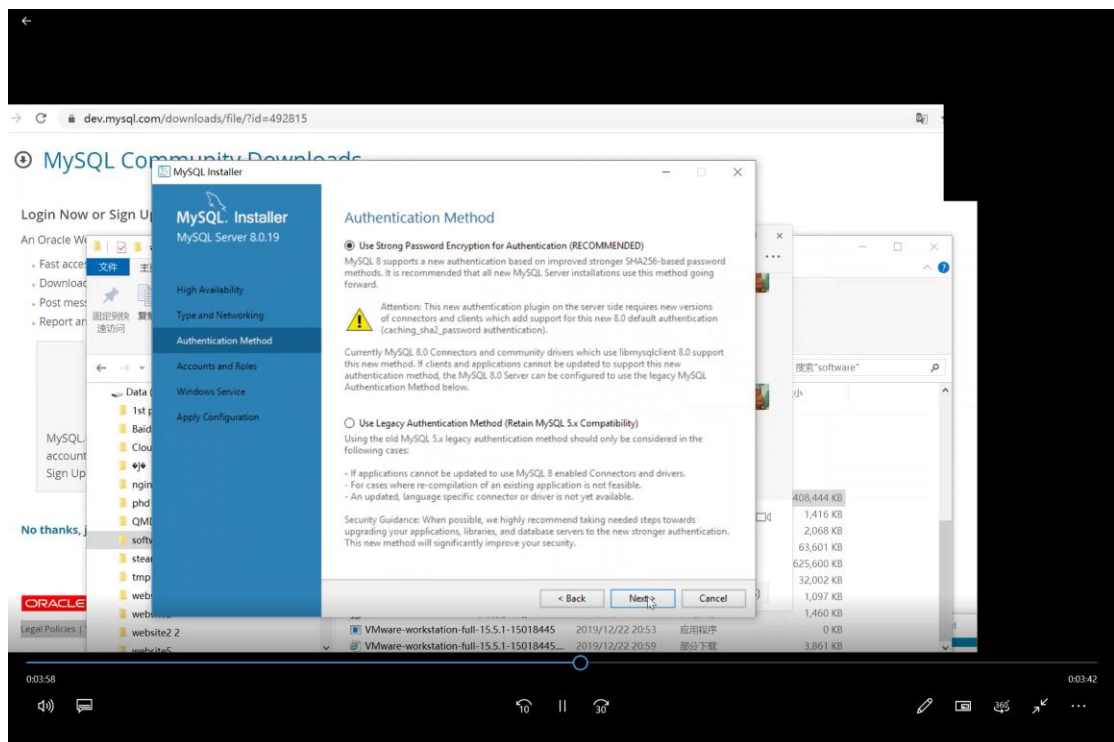

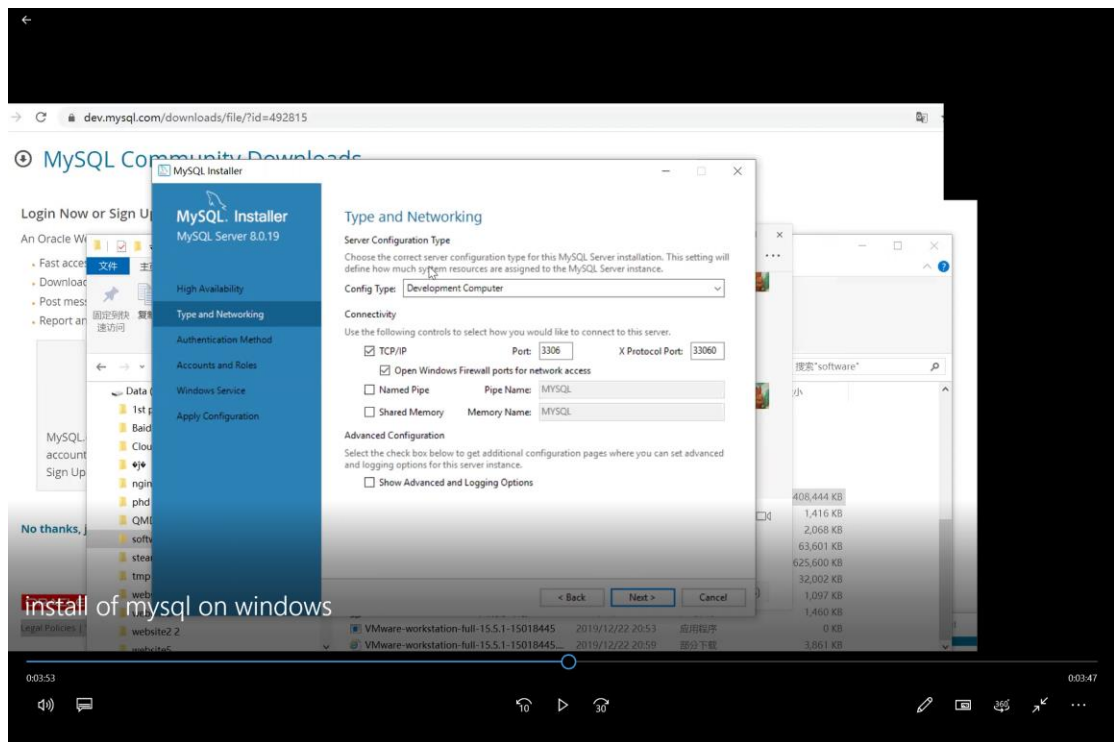

7. Choose the available product. Remember to click the green arrow.

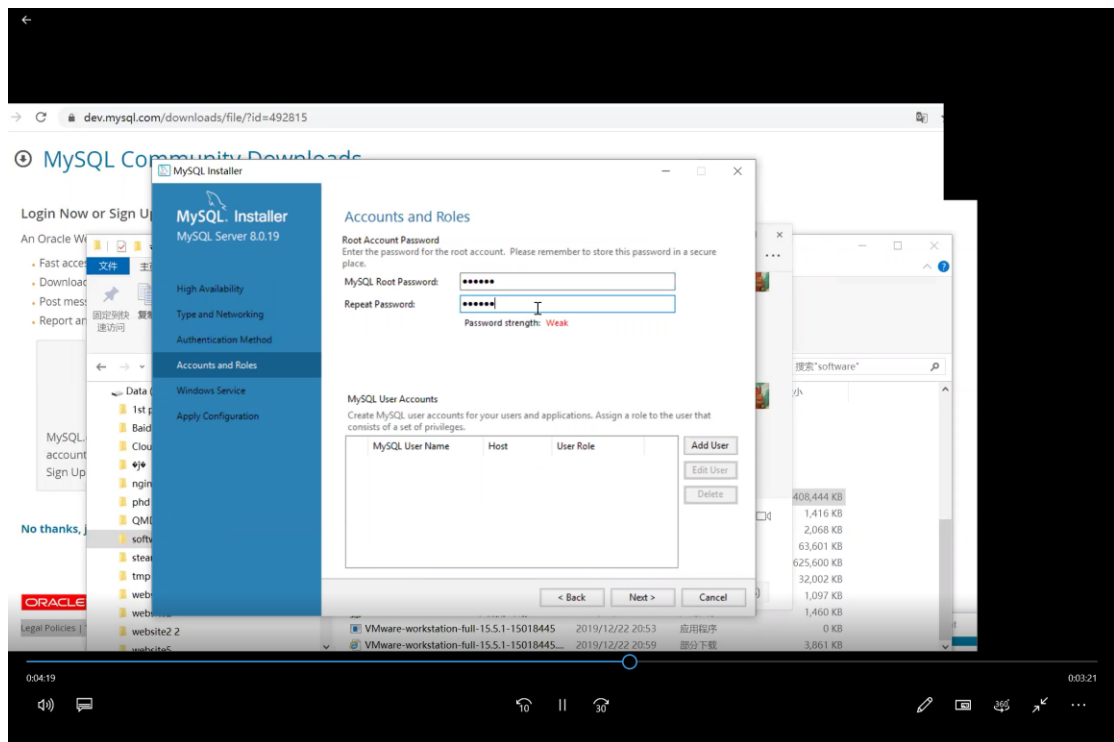

8. Click the "execute" and next.

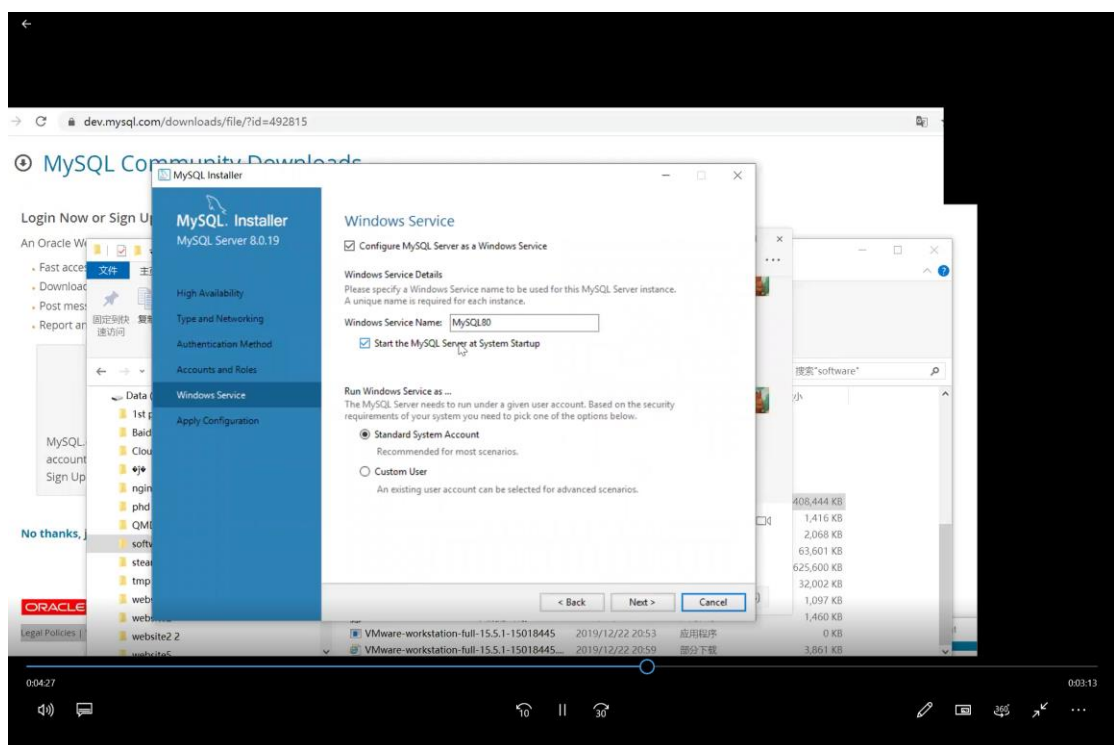

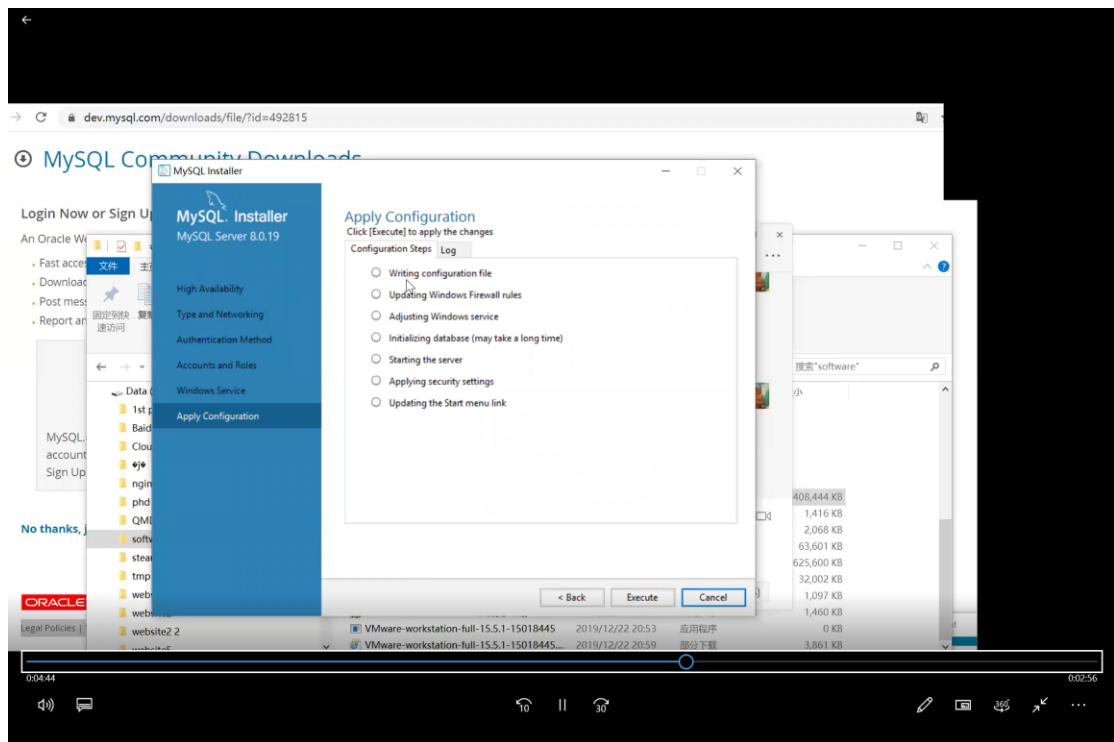

9. Set your password.

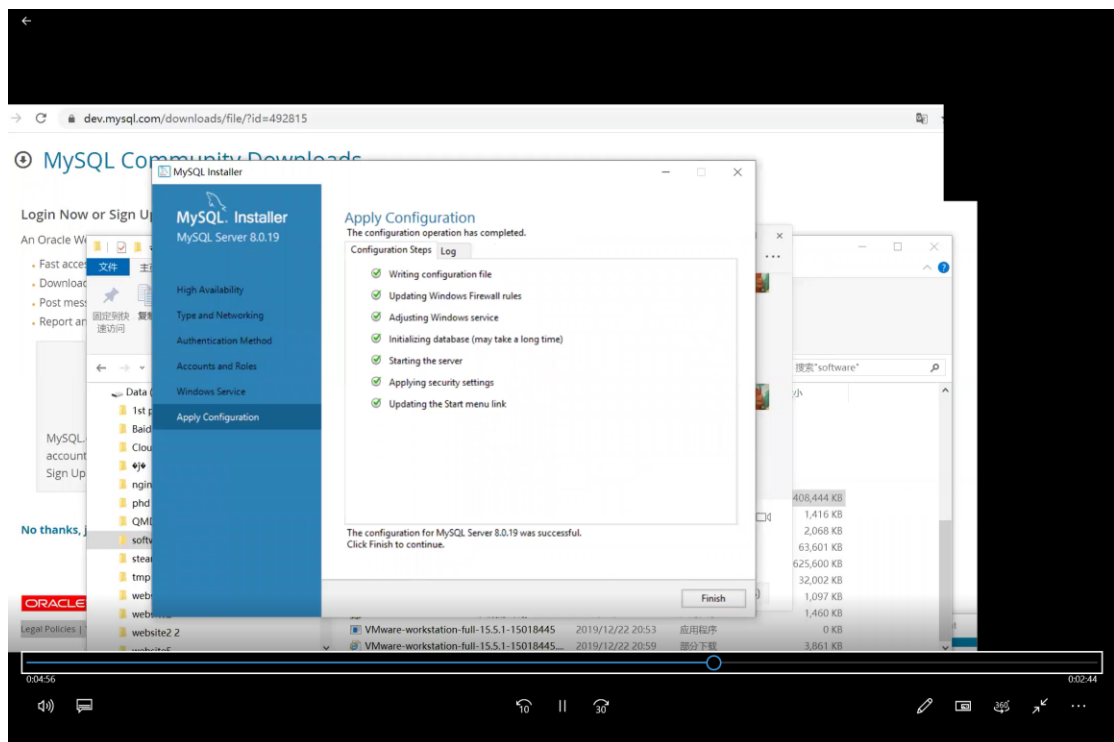

10. Click “next” and “execute”

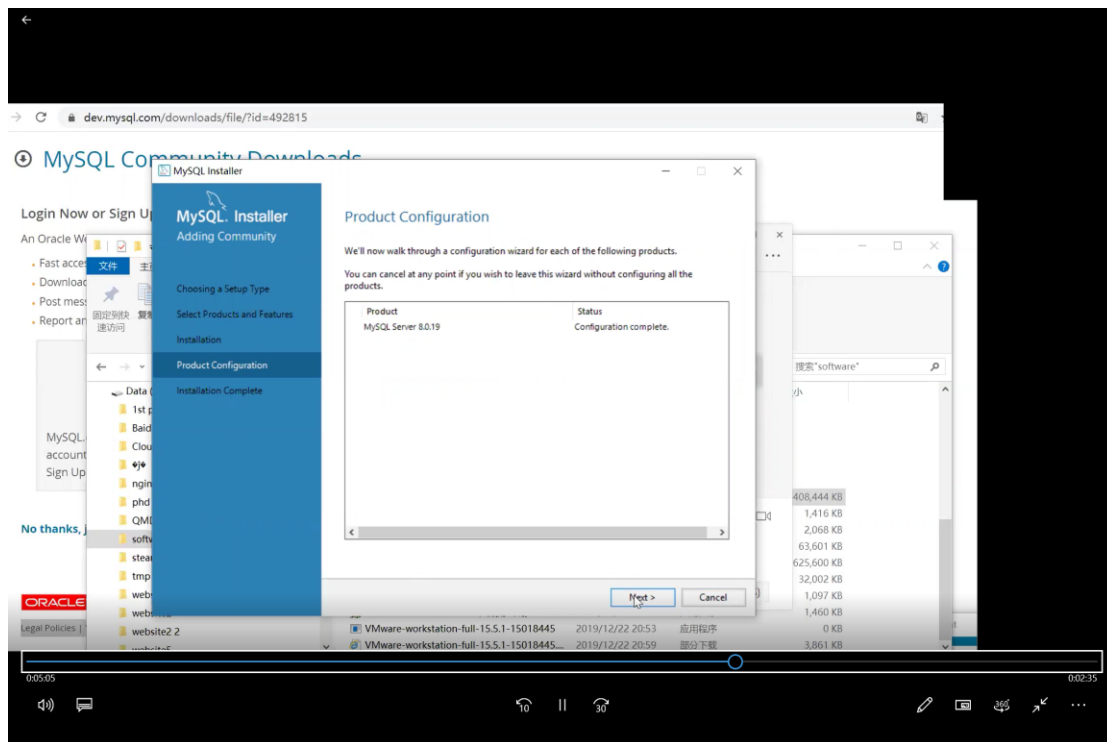

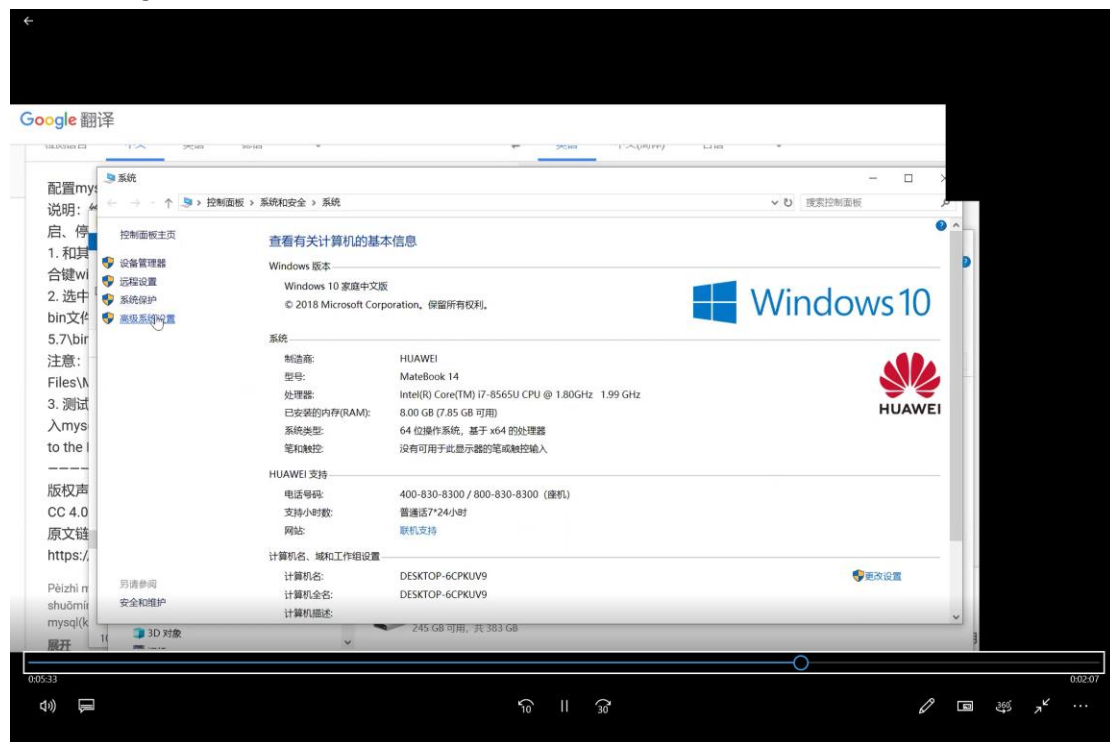

Click "finish"

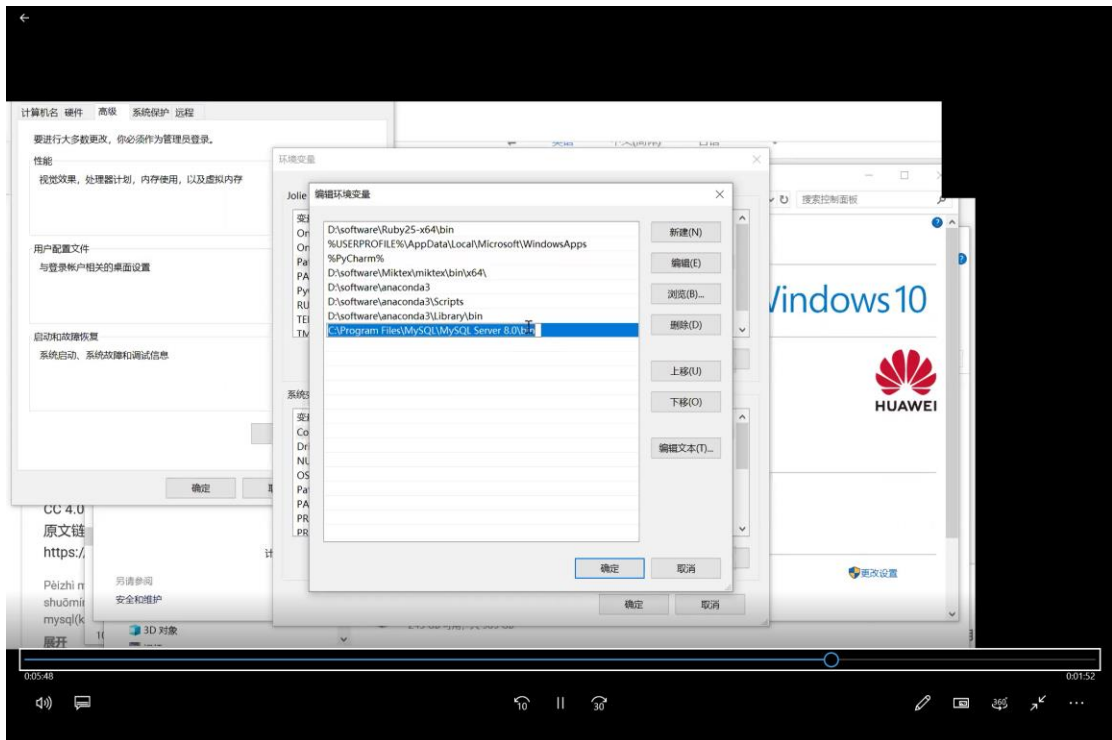

Click "next"

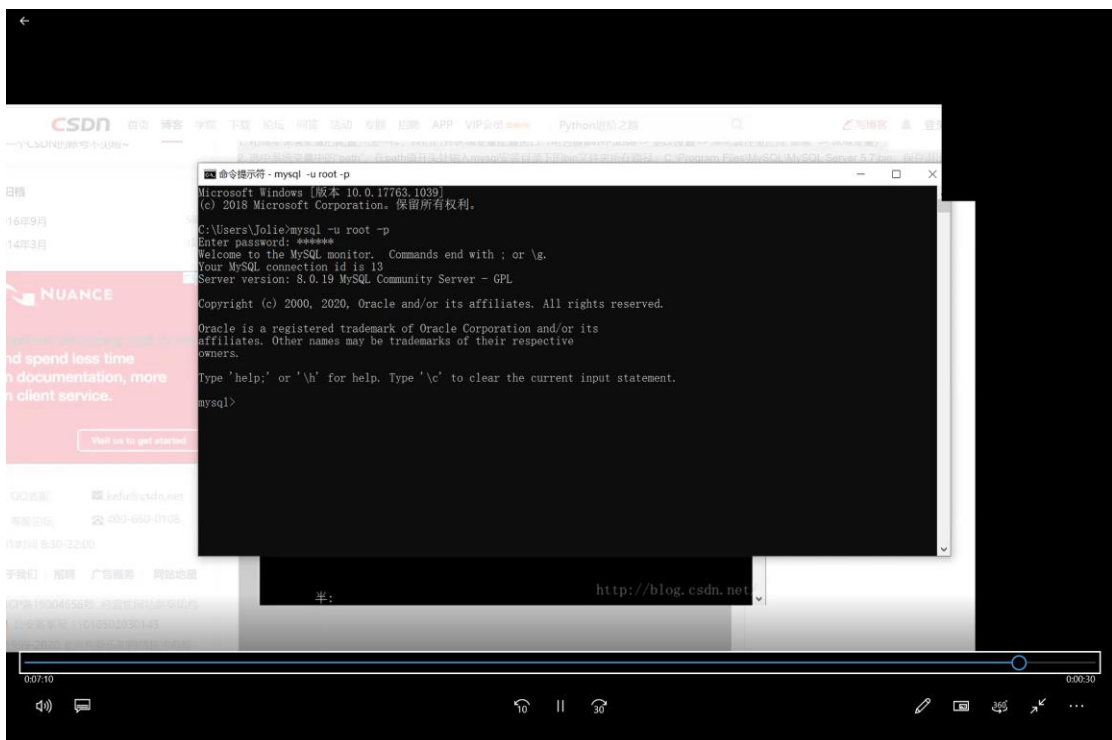

11. Configure the environmental variables.

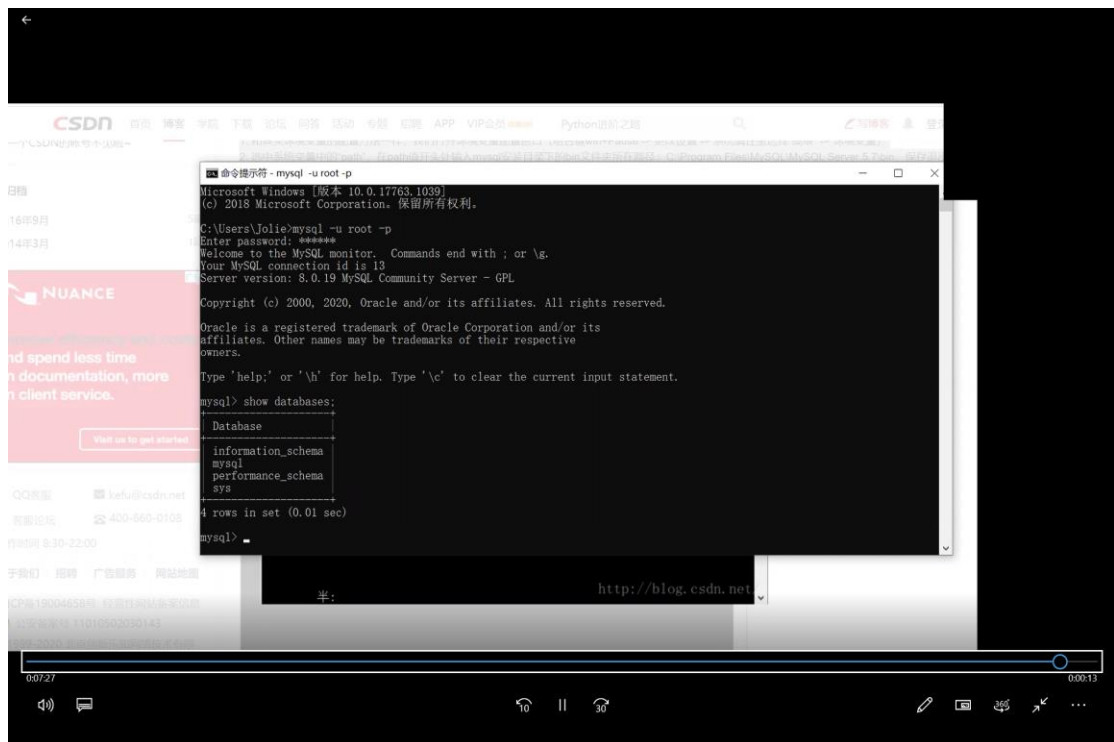

Add the path of the mysql/bin in the PATH.

12. Open the cmd and input the command "mysql -u root -p". Enter your password you have just set before.

13. You can check the database using command "show databases;"

OK, you have finished installing mysql.
